

# Flanigan BiLT Putters

## Putter Fitting

- Do You Push or Pull Your Putts?
  - Am I Playing with the Correct Loft and Lie for the Way I Roll the Ball?
    - Will a Jumbo Grip Help Me Make More Putts?
      - Am I Playing with the Correct Putter for My Stroke Style?

Flanigan BiLT has the only mobile SAM PUTTLAB (Science and Motion) in the State of Ohio. The Science and Motion (SAM) is an Ultra Sound Technology that analyzes 24 parameters of your putting stroke and is used widely on the PGA Tour.

Putting is both a science and an art (skill). At Flanigan BiLT Putters we believe that the science should be first. The reason science is first is because the mechanical characteristics of a putter, such as, loft, lie, length, etc... need to be properly fitted to the putting characteristics of each player. Thereby allowing the player to get the full potential out of the putter and to better enhance their putting skills.

Our putter Fittings main goal is to have you, the player, fitted correctly to your putter using our SAMS (Science and Motion) PUTTLAB which will enable us to determine your correct loft, lie, length, grip, head shape, and to improve your stroke characteristics. Before leaving you will understand how to correct your putting tendencies to improve your putting skills (art).

- A 1 hour fitting.
- A full analysis on the SAM PUTTLAB which measures 24 parameters.
- On Site putter adjustments.
  - Loft
  - Lie
  - Length
  - Grip
- Putting Drills to help correct tendencies.
- A full SAMS PUTTLAB report emailed to you. (Sample Report)

Putter Fitting \$125.00
